Experience

Apr 2025 – Present 📍 West Jakarta
Back-end Developer
Pusat Gadai Indonesia

As a Backend Developer at Pusat Gadai Indonesia, I am responsible for designing, developing, and maintaining the backend infrastructure of the General Affairs (GA) system. By leveraging technologies such as JWT implementing secure authentication mechanisms, and ensuring smooth data integration across internal systems. I collaborate closely with cross-functional teams to streamline operational workflows, particularly in asset management, procurement, and internal support processes.

Dec 2024 – Apr 2025 📍 West Jakarta
Full-stack Developer
Erajaya Swasembada, Tbk

As a GA Supervisor & Fullstack Developer (Sub Unit System Support), I am responsible for overseeing and optimizing GA Systems, including monitoring, troubleshooting, and performance enhancements. I design, develop, and maintain applications and databases to support internal needs while ensuring seamless system functionality. My role also involves managing the installation, configuration, and maintenance of both software and hardware infrastructure. Furthermore, I ensure that all systems comply with security standards and company policies to maintain a secure and reliable IT environment.

Oct 2019 – Dec 2024 📍 Tangerang Selatan
Full-stack Developer
Universitas Pembangunan Jaya

Working at Universitas Pembangunan Jaya as a Full-Stack Developer, my responsibilities include building new systems as needed, as well as developing and maintaining various features for existing applications. I am involved in both front-end and back-end development, ensuring seamless integration between user interfaces and server-side functionalities.
